

SeamFree™ Liquid Membrane System Advantage

A liquid-applied, elastomeric and monolithic solution for flat and low slope roofs.

Many cities are beginning to restrict asphalt kettles or flames on roofs. The challenge is to create a long lasting, tough roofing solution that can easily be applied in tight areas. The solution – SeamFree Liquid Membrane System from Johns Manville.

The SeamFree Liquid Membrane System is ideal on concrete decks in both new construction and re-roof applications. This proven technology is perfect for roofs with numerous penetrations since it easily conforms to any shape and provides a seamless, membrane that will stand the test of time.

Compatible with the PermaFlash™ Bituminous Flashing System

SeamFree Liquid Membrane System is designed to work in conjunction with the PermaFlash system. The liquid membrane adheres to the PermaFlash product providing a seamless, monolithic roof and an aesthetically pleasing appearance.

Several surfacing options – even a Cool Roof!

You have many options with the SeamFree Liquid Membrane System. Leave it uncovered, coat it with TopGard® 4000 or TopGard® 5000 reflective coatings, cover it with granules, gravel or even top with pavers for plaza decks. Any of these applications will provide a durable, elastomeric roof system that can be eligible for up to a 20-year JM Peak Advantage® Guarantee.

Uses:

- Flat roofs
- Plaza decks
- Small areas
- Areas where asphalt is not allowed or practical
- Green Roofs
- Planters
- Crack isolation waterproofing

Benefits:

- Elastomeric
- Liquid applied
- Low odor
- Resilient — polyester reinforced
- Seamless and self terminating
- Wide application temperature range
- Quick cure
- UV stable
- Eligible for a 20-year guarantee
- Suitable for use in areas subject to ponding water

Components:

- SeamFree Liquid Membrane Base (4.4 gal)
- SeamFree Liquid Membrane Activator (44.1 oz)
- SeamFree Reinforcing Scrim (40" x 324')
